### **TEST REPORT N. 35373**

Page 1/2

Applicant: Eterno Ivica S.r.I., via Austria Z.I. n. 25/E - Padova

Application: Received at 22/01/2013

Material: 3 samples of pedestal "NEW-MAXI NM5" series, received at 22/01/2013

Required test: Measure the maximum compressive load of the specimen and the displacement of the testing machine's crossbar.

Testing method: The compression tests were made for all the 3 samples. The components of the pedestal had been assembled and the four tabs removed, the height of pedestal was regulated to the medium (210.0 mm) stroke of the screw.

Testing speed set to 10 mm/min (checking movement of moving crossbar of the universal testing machine Galdabini, type Sun/60, with a load capacity of 600 kN).

The load applied with two hardened steel plate at the centred on the pedestal.

The values of maximum load ( $F_{\text{max}}$ ) are the values of load at first failure/rupture.

The testing machine's certificate of calibration is  $n^{\circ}020-13F$  about Calibration centre LAT  $n^{\circ}$  34 with due data January 15<sup>th</sup>, 2014.

Test activities were carried out on April 3<sup>rd</sup>, 2013.

For any technical and dimensional detail, assembling scheme and any other information not included in this document, brochures and technical data sheets are at Applicant's disposal.

Specimen	Max Load F <sub>max</sub> [kN]	Stroke at F <sub>max</sub> [mm]
1	29.73	6.2
2	26.04	5.5
3	30.04	6.2

### Test Result

Padova, May 2<sup>nd</sup>, 2013
